

Dear Customer

Thank you for purchasing a Topstak Log store. Your store has been constructed with FSC approved timber from a locally sourced supplier with stainless steel feet for longer durability.

Assembly

Each log store is fully assembled during construction and broken back down into 4-5 sections for ease of transport. Please follow the below steps for re-assembly.

1. Find a suitable location for your store, ideally this should be a hard standing area which will hold the heavy weight of a fully stacked log store. Place the base section of the store in the desired location.
2. Fix the sides of the store into each of the stainless steel feet
3. Lift the roof section onto the side supports so the roof beams fit between each leg. Using a Phillips screwdriver screw through the roof beam into each leg through the pre-drilled holes.
